Abstract of JP2089482

PURPOSE:To make a phone call to an opposite party quickly and accurately by providing a device applying automatic dial to a telephone number corresponding to a face picture selected by a selector. **CONSTITUTION:**If a name or telephone number of an opposite party desired to be called is not clear, a keyboard 8 is operated to access the information relating to plural 3rd parties being able to be communication opposite parties in a data base 7 and the result is displayed on a video display 3. A picture 100 being opposite face photograph is displayed on the display device. Then display numbers 1-9 are selected by using a ten-key. Thus, after the opposite party to be communicated is confirmed, the next candidate key, the ten-key on the keyboard 8 are operated to select a number and when the automatic dial key is operated in this state, the opposite telephone number displayed on the designated location is dialed automatically. On the other hand, when a terminal set A receives a telephone call from a terminal set B, a picture signal and a voice signal sent from the opposite party via a transmission line 12 are separated by a separation circuit 10, decoded by a decoding circuit 11 and the picture and voice are outputted.
